'The Japanese Garden' by Sophie Walker explores the history of the unique Asian art form and its contemporary relevance. Pictured here, the Daikaku-ji in Kyoto, which dates back to 814, during the Heian Period in Japan. Photography: Travellinglight/Alamy Stock Photo

Insight into the enigmatic nature of the Japanese garden is revealed beneath a dark green fabric covered book written by garden designer Sophie Walker and published by Phaidon. 'The Japanese Garden' covers the history, design and concepts behind this unique Asian art form through a charmingly detailed narrative that varies in pace from thematic chapters, to intimate essays and photography inside which the reader can get lost.

Walker leads the way down a pathway of discovery rooted in Zen Buddhism, the arrival of Feng Shui from China, Japan's distinct, diverse and unpredictable climate and landscape and the first written guide to the art of garden making, the *sakuteiki* or 'The Reasons for Garden-making', written in the 11th century.

Chapters explore and illustrate the distinct typologies of Japanese gardens – from Shinto shrines, Buddhist temple gardens, Imperial gardens, rock gardens, tea gardens, courtyard gardens and contemporary designs – always thematically interwoven with unifying concepts of self exploration, religion and Japanese culture.

The Shisen-dō, Soto Zen Buddhism, Kyoto, 1641, Edo Period, designed by Ishikawa Jōzan shows an example of how architecture was used to frame views of the garden. Photography: John Lander

Gardens grouped by typologies gradually educate the reader in the symbolic elements such as the path, the courtyard, still water, the bridge and the gateway. These each reveal precise meanings and are the tools that define the Japanese garden as a distinct art form.

Folded between chapters and photographs are essays by leading architects, artists and designers such as Tadao Ando, John Pawson and Lee Ufan that are short, personal treatises telling of intimate thoughts, experiences and ruminations on Japanese gardens.

Artist Lee Ufan writes of the gardens of Kyoto: 'I am overcome by the sensation that time has stopped, that I have slipped inside another dimension.' Kyoto's historic gardens were designed as three dimensional manifestations of ancient East Asian paintings.

Techniques such as the shakkei or 'borrowed scenery' effect played with proportions to create the appearance of distant lakes and mountains, or plants were selected such as the niwaki-pruned pine trees in the Adachi Museum garden, to resemble wizened trunks of older trees, while the yellow Zoysia lawns of the Imperial Palace East Gardens in Tokyo appear like gold paint in the winters.

An example of the Japanese rock gardens closely connected to Zen Buddhism, the Kennin-ji established under the Rinzai Zen Buddhism school in Kyoto in 1202, Kamakura Period. Photography: Sophie Walker

Another essay titled 'Void, silence and transition' by Anish Kapoor explored the Daisen-in garden of raked gravel in a courtyard that 'offers no answers' but 'hovers in potential' – theories that were directly connected to Zen Buddhist principles of remaining empty, yet therefore open to everything.

These Karesansui or rock gardens, were hugely influential in inspiring the minimalist post war conceptual art movement in Japan, Mono-ha, during the 1960s Japan, as well as internationally in the work of artists such as Richard Serra and Richard Long. The Zen rock garden of Ryoan-ji was the subject of a postcard from Walter Gropius to Le Corbusier in June 1954 as well as John Cage's abstract composition for voice Ryoan-ji (1983-5).

From a barren rock garden full of potential, to the 'unenterable' courtyard garden designed to open a window to another world, and the stone pathway that carves out a psychological journey – Walker shows that the Japanese garden is as much a spiritual experience as it is a physical one.

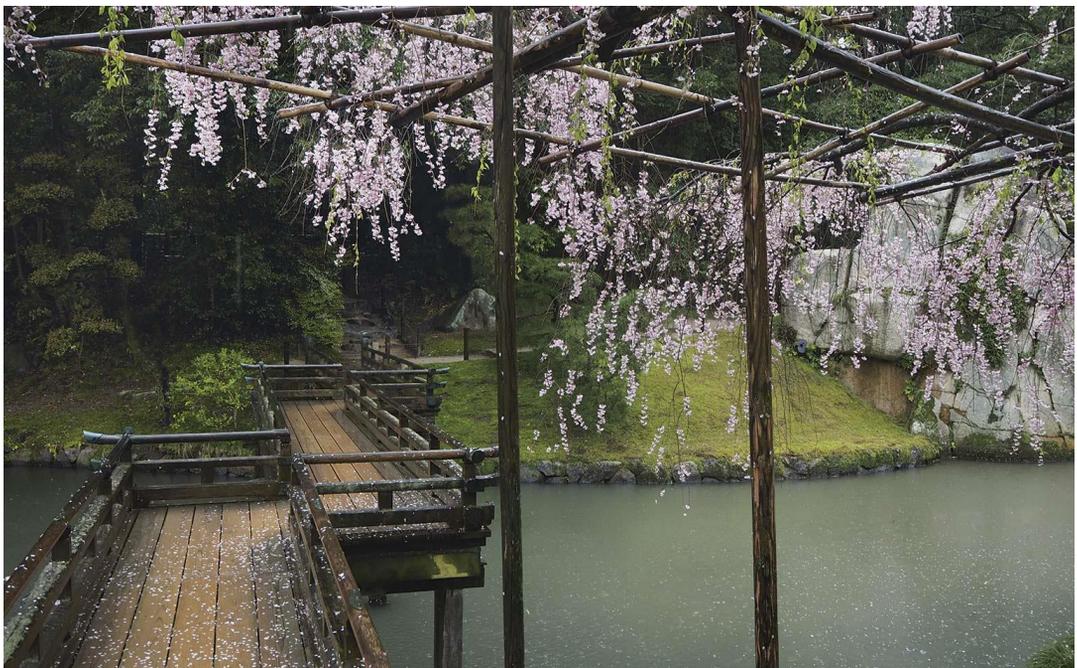

The reflection of the garden and pavilion on still water is an important and carefully considered part of Japanese garden design. Pictured here, the Kinkaku-ji (Temple of the Golden Pavilion), a garden established within the tradition of Rinzai Zen Buddhism, in Kyoto in 1398, during the Muromachi Period. The pavilion was rebuilt in 1955, during the Shōwa Period. Photography: Anish Kapoor. All Rights Reserved, DACS 2017

The Adachi Museum Garden in Yasugi designed by Zenkō Adachi in 1970 during the Shōwa Period, shows how scenery and plants were manipulated to look like a traditional East Asian painting. Photography: Malcolm Raggett

Many Japanese gardens were designed not to be entered, but as a focal point for mediation. Here we see how water provides a boundary into the garden at the Chishaku-in in Kyoto, which dates back to 1593, Azuchi-Momoyama Period; and was restored by Unshō in 1764, Edo Period. Photography: John Lander

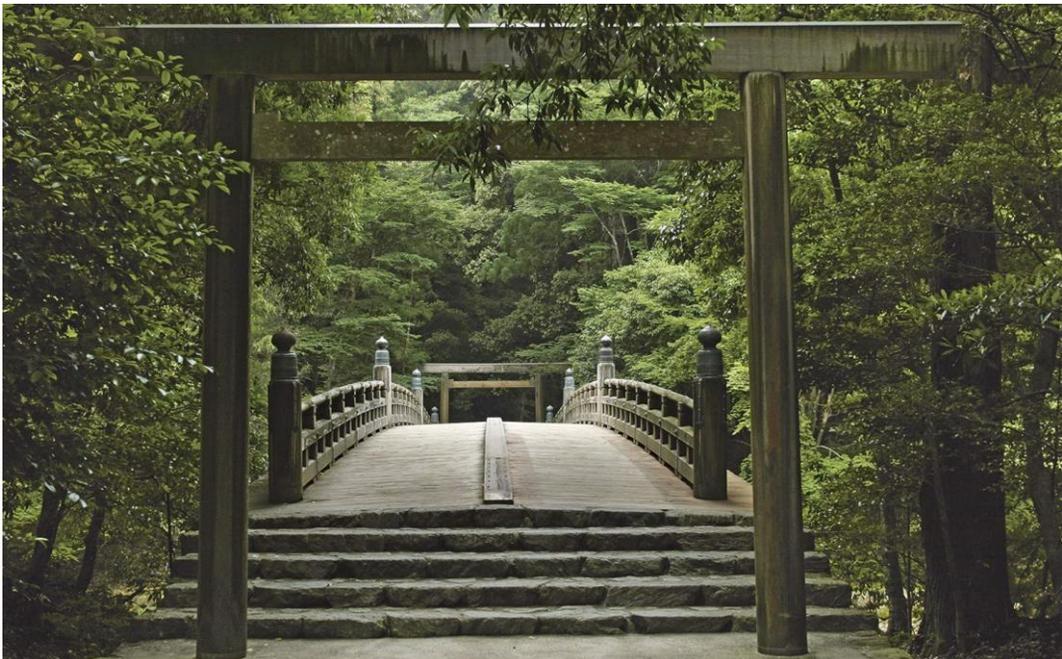

The bridge is a symbolic element of Japanese garden design referring to a transitional moment or a journey. Pictured here, cherry blossom above a wooden bridge at Kōraku-en, Okayama. Photography: Sophie Walker

A courtyard garden at Kahitsukan Kyoto Museum of Contemporary Art, Kyoto, designed in 1981 by Kajikawa Yoshitomo with Akenuki Atsushi. Photography: Sophie Walker
